Responsive Our Services Section Using HTML & CS

CA By **Coding Artist**   5th December 2021   👁 1

Hello and welcome to today's tutorial. In today's tutorial, we will learn how to create – a responsive our services section. To create this project we will use HTML and CSS. We use a combination of flex layout and media queries to create this responsive design.

I have a bunch of responsive design tutorials on my youtube channel. You can check them all in this playlist here.

Video Tutorial:

If you would like to learn by coming along to the video tutorial, then check out the video down below. Also, subscribe to my youtube channel so you don't miss any of the exciting tutorials I post regularly.

Project Folder Structure:

Before we start the coding let us first create the project folder structure. The project folder is called – Responsive Services Section. Inside this folder, we have two files – `index.html` and `style.css`. These files are the HTML document and the stylesheet.

HTML:

We start with HTML. Firstly copy the code provided below and paste it into the HTML file.
The HTML code consists of a `section` tag. Inside the section, we have two divs with class names `row`. Each row consists of a `column`. The column wraps `cards`. Within each card, we have an `icon`, `heading` and `p` tag.

```
1.  <!DOCTYPE html>
2.  <html lang="en">
3.     <head>
```
